SGS QUALIFOR FOREST MANAGEMENT STANDARD FOR MOROCCO 2010

This checklist presents the SGS Qualifor standard for forest certification against the FSC Principles and Criteria. This standard forms the basis for:

- Development of a regional standard
- Scoping assessment
- Certification assessment
- Surveillance assessment
- Information to stakeholders on the assessment criteria used by SGS Qualifor

ADAPTATION OF STANDARD TO MEET LOCAL REQUIREMENTS AND THRESHOLDS

The objective of local adaptation of the SGS Qualifor standard is to:

- i. identify any aspects of the standard that may be in conflict with legal requirements in the area in which the standard is to be used, and if such a conflict is identified shall evaluate it for the purposes of certification in discussion with the involved or affected parties. Conflict only occurs where a legal obligation prevents the implementation of some aspect of the generic standard. It is not considered a conflict if the requirements of the generic standard exceed the minimum requirements for legal compliance;
- ii. identify any aspects of its generic standard, which specify performance thresholds lower than the minimum legal requirement in the country concerned. If any such differences are identified the relevant thresholds shall be modified to ensure that they meet or exceed the minimum national requirements.
- iii. add specific indicators (with appropriate means of verification if required) and/or cross-references to the identified documentation to evaluate compliance with key requirements of the national and local forest laws, administrative requirements and multi-lateral environmental agreements related to the FSC Principles 1 10.
- iv. take account of the national context with regards to forest management;
- v. take account of national environmental, social and economic perspectives;
- vi. ensure that the standard is applicable and practical in the country concerned;
- vii. ensure that the standard is applicable and practical to the size and intensity of management of the Forest Management Unit concerned;
- viii. address specific issues that are of general concern to any stakeholder group in the country concerned.

SGS QUALIFOR is not required to seek or develop a consensus with regard to the modification of our generic standard. SGS Qualifor will however make meaningful accommodation of stakeholder concerns and will be guided in this by:

- our knowledge of the indicators and means of verification that have been included in other, FSC-accredited, regional, national or sub-national standards, with regard to the issues raised:
- advice provided in writing by the FSC National Initiative in the country concerned as to the likelihood that a proposed modification would have the support of the majority of the members of each chamber of an FSC working group active in that country;
- iii. advice provided in writing by an FSC Regional Office covering the country concerned, as to the likelihood that a proposed modification would have the support for the majority of FSC members of each chamber in the region.
- iv. the scale and intensity of forest management.

SGS QUALIFOR should be able to demonstrate that the requirements of the locally adapted generic standard are broadly in line with the requirements of other FSC-accredited national standards applicable to similar forest types in the region, and with any guidance received from an FSC National Initiative in the country concerned.

SGS Qualifor is not required to make further changes to the locally adapted standard used for an evaluation during the period of validity of the certificate except as necessary to bring it into compliance with any FSC Policies, Standards, Guidance or Advice Notes subsequently approved by FSC.

LAYOUT OF THE STANDARD:

The standard follows the FSC Principles and Criteria of Forest Stewardship (January, 2000). The Standard is divided into 10 sections, each corresponding to one of the FSC principles with the criteria listed underneath each principle. Refer to the diagramme on the next page for further clarification.

Each page of the standard is divided into 3 columns. The standard also serves as the checklist that is used during an assessment and for every criterion the following is provided:

The Qualifo	or Requirement: Indicator	This outlines the norm or indicators that Qualifor requires for compliance with the specific FSC criterion. A potential source of information or evidence that allows an auditor to evaluate compliance with an indicator. Some indicators make a distinction between the requirements for "normal" forests and SLIMF operations (Small and Low Intensity Managed Forests).	
Verifiers		Verifiers are examples of what the SGS assessor will look for to ascertain if the specific norm or indicator has been met. This list is not exhaustive and the assessor may use other means of verifying the relevant indicator.	
Guidance	The FSC	Guidance is written in <i>italics</i> and assists the assessor in understanding the requirement of the specific indicator.

PRINCIPLE 1. COMPLIANCE WITH LAWS AND FSC PRINCIPLES:

Forest management shall respect all applicable laws of the country in which they occur and international treaties and agreements to which the country is a signatory, and comply with all FSC Principles and Criteria

Criterion 1.1 Forest management shall respect all national and local laws and administrative requirements

Verifiers & Guidance: Indicator 1.1.1 Interviews with and information supplied by regulatory There is no evidence of significant nonauthorities, other stakeholders and Forest Managers. compliance with all national and local laws and administrative requirements Control of required legal documentation. policies, operational procedures and standards demonstrate compliance with requirements. SLIMF: The forest manager knows what the legislation requires. Field observation and documentation available show that legislation is being complied with in-field. A legal non-compliance will be considered "significant" if: i. it has been allowed to persist or remain for a period of time that would normally have allowed detection; and/or ii. it is an intentional or a blatant/self-evident disregard for the A legal non-compliance will not be considered "significant if the deviation is short-term, unintentional and without significant damage to the environment. Indicator 1.1.2 Verifiers & Guidance: Interviews with Forest Managers and field observations. Forest managers shall demonstrate awareness and compliance with relevant codes of practice, List of applicable laws, regulations and national guidelines. operational guidelines and other accepted norms or agreements.

Criterion 1.2 All applicable and legally prescribed fees, royalties, taxes and other charges shall be paid

Indicator 1.2.1	Verifiers & Guidance:
There is evidence that required payments have been made.	Invoices, tax returns, receipts.
	Interviews with and information supplied by regulatory authorities and other stakeholders.
	No evidence of non-payment
Indicator 1.2.2	Verifiers & Guidance:
Provision has been made to meet the costs of	Specific provisions in financial planning and long-term budgets.
future fees	SLIMF:
	Forest manager can explain how future costs will be provided for.

Criterion 1.3

In signatory countries, the provisions of all the binding international agreements such as CITES, ILO conventions, ITTA, and Convention on Biological Diversity, shall be respected.

Indicator 1.3.1

There is awareness and implementation of the requirements of the Convention of International Trade in Endangered Species (CITES) and controls in place to ensure continuing compliance with such

SLIMF:

There is awareness of any local species that are covered by the requirements of the Convention of International Trade in Endangered Species (CITES) and controls in place to ensure continuing compliance with such

Verifiers & Guidance:

Interviews with Forest Managers

Operational documentation

Required licenses are in place

Indicator 1.3.2

Forest Managers are aware of the requirements and have implemented controls to ensure continuing compliance with the International Labour Organisation (ILO) conventions that apply to their operations. ILO 87 and 98 are minimum requirements for certification.

SLIMF:

Forest Managers are aware of and have implemented controls to ensure continuing compliance with national legislation relating to labour matters

Verifiers & Guidance:

Interviews with Forest Managers, workers, contractors, labour unions and regulatory authorities.

Review of policies, procedures and personnel records.

SLIMF:

Forest Managers are aware of the requirements and there are no objective evidence of non-compliance.

Indicator 1.3.3

(Not applicable to SLIMF)

Forest Managers are aware of the requirements and have implemented controls to ensure continuing compliance with ITTA.

Verifiers & Guidance:

Interviews with Forest Managers, regulatory authorities and other stakeholders.

Review of policies, procedures and records

Indicator 1.3.4

(Not applicable to SLIMF)

Forest Managers are aware of the requirements and have implemented controls to ensure continuing compliance with the International Biodiversity Convention.

Verifiers & Guidance:

Interviews with Forest Managers, regulatory authorities and other stakeholders.

Review of policies, procedures and records.

Criterion 1.4

Conflicts between laws, regulations and the FSC Principles and Criteria shall be evaluated for the purposes of certification, on a case-by-case basis, by the certifiers and the involved or affected parties

Indicator 1.4.1

Any identified conflicts are brought to the attention of SGS and involved or affected

Verifiers & Guidance:

SGS will assess the conflict and advise on resolution thereof, where such were possible.

parties.	Interviews with Forest Managers and other stakeholders.		
Criterion 1.5 Forest management areas should be protected from illegal harvesting, settlement and other unauthorised activities			
Indicator 1.5.1	Verifiers & Guidance:		
Forest Managers have taken reasonable measures to monitor, identify and control illegal	Field observations show no damage from unauthorised or illegal activities		
harvesting, settlement and other unauthorised activities.	Manager's explanation of protection/ prevention activities e.g. signs, gates, patrols, etc		
	Copies of reports made to the authorities of problem activities		
	Boundaries are known to the manager and local communities and are easily identified in the field.		
	Boundaries are marked in areas where there is a high risk of encroachment.		
Indicator 1.5.2	Verifiers & Guidance:		
There are adequate personnel and surveillance resources to control such activities	Field observations provide no evidence of ongoing illegal activities		
Criterion 1.6 Forest managers shall demonstrate a long-term commitment to adhere to the FSC Principles and Criteria			
Indicator 1.6.1	Verifiers & Guidance:		
There is a publicly available policy endorsed by	Written policy with appropriate statement is available		
the owner/most senior management explicitly stating long term commitment to forest	SLIMF:		
management practices consistent with the FSC Principles and Criteria	The management plan		
SLIMF:	Plans (written or informal) for investment, training, and sharing of income or other benefits		
The forest manager has plans to manage the forest in the long term in a way that is compatible with the FSC Principles and Criteria	Past management has been compatible with the P&C		
Indicator 1.6.2	Verifiers & Guidance:		
(Not applicable to SLIMF)	Interviews with Forest Managers, workers and stakeholders.		
The policy is communicated throughout the organisation (including to contractors) and to external stakeholders	Evidence of distribution of policy to stakeholders.		
Indicator 1.6.3	Verifiers & Guidance:		
Where the owner/manager has some responsibility for forest lands not covered by the certificate, then there is a clear long term commitment to managing all forests in the spirit of the FSC P&C	The applicant for certification must make a full disclosure of all forest areas over which the applicant has some responsibility, whether as owner (including share or partial ownership), manager, consultant or other responsibility. The disclosure shall be documented in the main assessment report. You must record full details of ownership, forest name, type, area and location for each such forest. This information must be made available to stakeholders as part of the consultation process. When the evaluation does not include all the forest areas in		
L	which the applicant is involved, the applicant must explain the

scale at a landscape level associated with the opinion of a majority of community representatives and/or the time period over which the dispute has been in place

Interviews with Forest Managers and consultation with representatives of local communities.

Complete record of a history of disputes.

Indicator 2.3.4

(Not applicable to SLIMF)

Dispute resolution procedures shall make provision for the requirement that where the future tenure or use rights of communities may be compromised, forest operations that are, or may be the direct cause of the dispute, will not be initiated or will be suspended until the dispute had been resolved.

Verifiers & Guidance:

Interviews with Forest Managers and consultation with representatives of local communities.

Complete record of a history of disputes.

PRINCIPLE 3. INDIGENOUS PEOPLES' RIGHTS:

The legal and customary rights of indigenous peoples to own, use and manage their lands, territories, and resources shall be recognised and respected.

Criterion 3.1 Indigenous peoples shall control forest management on their lands and territories unless they delegate control with free and informed consent to other agencies.

Indicator 3.1.1

Indigenous people who have customary or legal title to land and resources are identified and their entitlements recognised in management plans and the areas concerned demarcated on maps

Verifiers & Guidance:

Management plans and maps.

Consultation with representatives of indigenous peoples.

Indicator 3.1.2

Rights identified in terms of Indicator 3.1.1 are respected.

Verifiers & Guidance:

Consultation with representatives of indigenous peoples.

Indicator 3.1.3

There is documented evidence that free and informed consent has been given by affected communities to allow forest management activities that may affect their use rights of the FMU.

Verifiers & Guidance:

Affected communities should have the financial, technical and logistical capacity to enable "free and informed consent"

Consultation with representatives of indigenous peoples.

No evidence of disputes.

Evidence that agreed payments for use right and/or resources are being made.

Criterion 3.2 Forest management shall not threaten or diminish, either directly or indirectly, the resources or tenure rights of indigenous peoples

Indicator 3.2.1

Any impacts of forest management on indigenous communities' resources or tenure

Verifiers & Guidance:

Records or impact assessments.

Consultation with representatives of indigenous peoples

SLIMF: Interviews with indigenous peoples/local communities PRINCIPLE 4. **COMMUNITY RELATIONS AND WORKER'S RIGHTS:** Forest management operations shall maintain or enhance the long-term social and economic well being of forest workers and local communities. Criterion 4.1 The communities within, or adjacent to, the forest management area should be given opportunities for employment, training, and other services Indicator 4.1.1 Verifiers & Guidance: Interviews with Forest Managers and workers. People in local communities are given opportunities in employment, training and Consultation with representatives of local communities and contracting labour unions. **SLIMF:** Training strategies. Local workers and contractors should be used Job advertisements in local publications wherever possible Indicator 4.1.2 Verifiers & Guidance: Interviews with contractors. In large scale organisations, contracts are awarded through a transparent process on the Policies and procedures of the assessed organisation. basis of clear criteria; justification for final Documentation on contracting of services. selections is documented Indicator 4.1.3 Verifiers & Guidance: Workers include: employees, contractors, sub-contractors, and In <u>large scale organisations</u> training and/or other any other persons carrying out forestry work on the forest appropriate forms of assistance to local people management unit. and workers to meet the organisation's longterm staffing requirements are developed and Long-term training plans. supported where appropriate Interviews with Forest Managers and workers. Indicator 4.1.4 Verifiers & Guidance: Service provision and support for local infrastructure, facilities (Not applicable to SLIMF) should, as a minimum, be consistent with meeting management Support is provided for local infrastructure and plan objectives over the long term (e.g. provision of basic health, facilities at a level appropriate to the scale of the education and training facilities where these do not exist) as well forest resources as avoiding or mitigating any negative social impacts of the operations. Consultation with representatives of local communities Provision of training; schooling; medical; facilities; housing; accommodation Indicator 4.1.5 Verifiers & Guidance: Interviews with Forest Managers and local communities. Where possible and practicable, communities are given controlled access to forest and non-Evidence of controlled harvesting activities forest products on the FMU Morocco:

4.1.6.1: For public forests (forêts dites domaniales) on the contrary, the forest

legislation (Dahir de 1917 sur la conservation et l'exploitation des forets) recognize the right of the local population to collect dead wood for domestical use and controlled pasture (respect of an amount of animals defined by the organization).

Indicator 4.1.6

Policies and procedures and the implementation thereof make qualifications, skills and experience the basis for recruitment, placement, training and advancement of staff at all levels

SLIMF:

Employees are not discriminated in hiring, advancement, dismissal remuneration and employment related to social security

Verifiers & Guidance:

No evidence of discrimination on the basis of: race, colour, culture, sex, age, religion, political opinion, national extraction or social origin

Employment policies and procedures.

Interviews with Forest Managers, workers and Labour Union representatives.

SLIMF:

Interviews with workers and contractors

Indicator 4.1.7

All employees, contractors and sub-contractors must be paid a fair wage and other benefits, which meet or exceed all legal requirements and those provided in comparable occupations in the same region

Verifiers & Guidance:

Benefits may include social security payments, pension, accommodation, food, etc.

Records of payment

Interviews with Forest Managers, workers and Labour Union representatives.

Indicator 4.1.8

No workers should be engaged in debt bondage or other forms of forced labour

Verifiers & Guidance:

Interviews with Forest Managers, workers and Labour Union representatives

Indicator 4.1.9

Persons under 15 years are not employed in any forestry work

Verifiers & Guidance:

National legislation may set higher minimum ages, but these ages are defined in ILO Convention 138 Article 3.

Interviews with Forest Managers, workers and Labour Union representatives

Observations in the work place.

Indicator 4.1.10

Persons under 18 years should not be employed at night or to carry out heavy work or hazardous operations, e.g. pesticide application, harvesting, except for the purposes of training

Marocco:

4.1.10.1: It is forbidden to employ for night work minors of age less than 16 years.

4.1.10.2: It is forbidden to employ minors of less than 18 years in works that present danger risks excessive or surplus their capacities. These works are set up by a regulation and applies to the following activities (source: Decree n° 2-04-682 of the 16 kaada 1425 (December 29 2004) and also applies to women and to handicapped

Verifiers & Guidance:

Where children and young persons are to be removed from employment in order to comply with this requirement, criterion 4.4 on social impact assessment and mitigation will apply. Organisations are expected to carry out a social impact assessment of the displacement of children from the workplace and effectively mitigate that impact e.g. provide suitable alternative sources of family income and ensure the children have access to adequate education facilities.

employees):

- 1) mechanical repairs
- 2) use machines that exposes such to risk where these do not dispose of the necessary protective mechanisms.
- 3) services of the faucets vapor;
- laminage and étirage of the verge of tréfilerie; 5) Work which requires the use of scaffolding for the erection or cleaning of buildings.
- 6) Hard carried out works the toitures;
- 7) Demolition works;
- 8) Melting glass works
- 9) Manufacturing of bottles
- 10) Glass extrusion

Criterion 4.2 Forest management <u>should</u> meet or exceed all applicable laws and/or regulations covering health and safety of employees and their families

Indicator 4.2.1

Forest Managers are aware of laws and/or regulations covering heath and safety of employees and their families and comply with such.

For <u>large scale organisations</u> a written safety and health policy and management system are in place

Verifiers & Guidance:

Forestry operations should follow the ILO Code of Practice on Safety and Health in Forestry.

Interviews with Forest Managers, workers and union representatives.

Guidelines/regulations are readily available.

Labour directives and inspection reports.

Company OHS records

Indicator 4.2.2

Forest Managers have systematically assessed the risk associated with all tasks and equipment and prescribed appropriate safe procedures, the use of personal protective equipment (PPE), emergency procedures and where appropriate, key responsibilities.

In <u>large scale organisations</u>, compliance with this requirement shall be supported by documentation

SLIMF:

All work done in the forest must comply with health and safety laws and regulations

Verifiers & Guidance:

Interviews with Forest Managers, workers and union representatives.

Documented risk assessments.

SLIMF:

Equipment is available to workers

Interviews with Forest Managers and workers

Field observations

Indicator 4.2.3

All workers have had relevant training in safe working practice and where required or appropriate, hold the necessary skills certificates.

Verifiers & Guidance:

Interviews with Forest Managers and workers.

Training schedules and records

Copies of skills certificates.

Indicator 4.2.4	Verifiers & Guidance:
Forestry operations comply as a minimum, with the ILO Code of Practice on Safety and Health in Forestry	Interviews with Forest Managers and workers
Indicator 4.2.5	Verifiers & Guidance:
All necessary tools, machines, substances and	Interviews with Forest Managers and workers.
equipment, including appropriate PPE, are available at the worksite and are in safe and serviceable condition	Field observations.
Indicator 4.2.6	Verifiers & Guidance:
Managers take all reasonable measures to	Interviews with Forest Managers and workers.
ensure that workers use the PPE that is provided	Field observations
Indicator 4.2.7	Verifiers & Guidance:

employees. For the works and employments that demand a previous medical examination, the employer must submit the employees that it proposes himself to recruit to a medical visit and to impose for them to renew next periodically this visit.

Indicator 4.2.10

There is evidence of a programme on the FMU that raises awareness of illnesses and diseases endemic to the area that affect forest workers or their families.

For <u>large scale organisations</u> there is contribution towards or provision of a prevention and control programme for any illnesses and diseases endemic to the area that affect forest workers or their families

SLIMF:

There is evidence of a basic programme on the FMU that raises awareness of illnesses and diseases endemic to the area that affect workers or their families

Verifiers & Guidance:

Interviews with Forest Managers and workers.

Interviews with social NGOs.

Records of support.

Health statistics for the region.

SLIMF:

Interviews with forest manager and workers

Criterion 4.3 The right

The rights of the workers to organise and voluntarily negotiate with their employers shall be guaranteed as outlined in Conventions 87 and 98 of the International Labour Organisation (ILO).

Indicator 4.3.1

Workers are free to organise and or join a trade union of their choice without fear of intimidation or reprisal. This will at a minimum comply with the requirements of the ILO Convention No. 87: Convention concerning Freedom of Association and Protection of the Right to Organise

Verifiers & Guidance:

Interviews with Forest Managers, workers and labour union representatives.

Indicator 4.3.2

Workers are free to organise and bargain collectively. This will at a minimum comply with the requirements of International Labour Organisation convention 98, Convention concerning the Application of the Principles of the Right to Organise and to Bargain Collectively

Verifiers & Guidance:

Interviews with Forest Managers, workers and labour union representatives

Indicator 4.3.3

There is an effective mechanism in place to provide information to, and enable the participation of workers in decision-making where this directly affects their working terms and conditions

Verifiers & Guidance:

Interviews with Forest Managers, workers and labour union representatives

SLIMF:

Workers or their representatives are accepted as participants in decision making

Criterion 4.4

Management planning and operations shall incorporate the results of evaluations of social impact. Consultations shall be maintained with people and groups directly affected by management operations.

Indicator 4.4.1

In conjunction with the local stakeholders affected and in accordance with the scale and intensity of management, the social, socioeconomic, spiritual and cultural impacts of forest operations are evaluated.

For <u>large scale organisations</u>, these impacts shall be documented

SLIMF (Small Forests):

Anyone who is likely to be directly affected by an operation is informed and has an opportunity to comment.

The forest manager must try to avoid negative impacts of operations.

SLIMF (Low Intensity Forests):

The forest manager proactively seeks assistance from external organizations to carry out an assessment of social impacts and/or social impact monitoring and uses the results to plan future management.

Verifiers & Guidance:

New operations will normally be subjected to formal impact assessments and these assessments must include the social environment. For ongoing operations it will be necessary to maintain communication with stakeholders and thus ensure the Forest Manager is aware of any current and/or potential impacts. Management plans must provide mitigatory measures to address such impacts, e.g. problems with dust or noise caused by operations are known and planning is adjusted to reduce or negate such

Interviews with Forest Managers and local communities.

SLIMF (Small Forests):

Discussions with neighbours and forest manager

Copies of newspaper advertisements, letters, posters and signs used to inform people of operations.

SLIMF (Low Intensity Forests):

Copies of Social Impact Assessment reports

Evidence of changes in management following results of an Social Impact Assessment or monitoring of social impacts.

Indicator 4.4.2

(Not applicable to SLIMF)

Adverse impacts, opportunities for positive impact and areas of potential conflict identified by evaluations are adequately addressed in plans

Verifiers & Guidance:

Interviews with Forest Managers and local communities.

Management plans

Indicator 4.4.3

An up-to-date list of stakeholders is maintained

Verifiers & Guidance:

Records

Consultation with stakeholders

Indicator 4.4.4

(Not applicable to SLIMF)

There is adequate and ongoing consultation with stakeholders (local people, workers and relevant organisations); in particular, stakeholders are aware that forest management plans and monitoring results are available for inspection, if high impact operations are planned, and that the FMU is being evaluated/monitored for certification

Verifiers & Guidance:

Records

Consultation with stakeholders and interviews with Forest Managers

Indicator 4.4.5

Issues raised by stakeholders are treated constructively and objectively

Verifiers & Guidance:

Maps of tree location

Harvest levels are sustainable over the long term

(a period equivalent to the rotation length of the trees harvested). Note that annual harvest levels may vary hugely.

SLIMF (Low Intensity Forests):

Harvest limits are established at sustainable levels, based on conservative estimates of tree growth and yield rates. The harvest limits are stated in the management plan.

Harvest and sales records and plans over the relevant time span.

Data on likely or actual growth rates of species harvested.

Indicator 5.6.2

Sustainable harvest and thinning intensities and frequencies have been calculated for the FMU based on the most up-to-date available information and do not exceed calculated replenishment rates over the long term.

Verifiers & Guidance:

Timber resource planning

Indicator 5.6.3

Authorised harvesting of non-timber forest products does not exceed calculated replenishment rates over the long term

Verifiers & Guidance:

Management plans

PRINCIPLE 6. ENVIRONMENTAL IMPACT:

Forest management shall conserve biological diversity and its associated values, water resources, soils, and unique and fragile ecosystems and landscapes, and, by so doing, maintain the ecological functions and the integrity of the forest.

Criterion 6.1

Assessment of environmental impacts shall be completed - appropriate to the scale, intensity of forest management operations and the uniqueness of the affected resources - and adequately integrated into management systems.

Assessments shall include landscape level considerations as well as the impacts of on-site processing facilities. Environmental impacts shall be assessed prior to commencement of site disturbing operations.

Indicator 6.1.1

(Not applicable to SLIMF)

The owner/manager has systematically identified and assessed the potential environmental impacts of all activities (including on-site processing facilities) carried out in the forest; the impacts of forest plans have been considered at the landscape level, taking account of the interaction with adjoining land and other nearby habitats. For Iarge scale organisations, the results of these impact assessments shall be documented.

Verifiers & Guidance:

For all operations or activities carried out on the FMU, there should be an evaluation of the possibility of the following potentially negative impacts being caused: soil erosion and compaction; changes to soil productivity; changes to invasive exotic, native or naturalised flora or fauna species abundance, diversity or distribution. Habitat fragmentation, pesticide, lubricant, nutrient or fertiliser pollution (by runoff, spray drift or spillage) and sedimentation of watercourses or water bodies; changes to water flow and drainage regimes of watercourses, water bodies, visual changes to prominent landscapes. Working Instruction 01 regarding on-site processing plants must be used as reference.

Interviews with Forest Managers, environmental NGOs and government conservation agencies.

Indicator 6.1.2

Site-specific assessments of the potential environmental impacts of all forest operations are carried out prior to commencement of site

Verifiers & Guidance:

A "significant activity is an activity that has the potential to cause environmental impacts that are:

Permanent or long term; or

disturbing operations, in a manner appropriate to the scale of the operations and the sensitivity of the site. Where such activities are considered "significant", these site-specific assessments are documented. "Significant" activities shall include, but not be restricted to:

- The building of new roads or substantial rerouting of existing roads;
- Any form of flow restriction in streams and rivers;
- Aforestation;
- Change in genus in the reforestation of more than 100 ha during the same planting season within an operational/management unit, where an FMU comprises more than one;
- Recreational activities and associated infrastructure
- Communication masts and associated infrastructure
- Power lines
- Water lines
- Change of natural vegetation to commercial or any other use.
- Erection of new fences
- Use of natural areas and products for commercial gain or any other purpose
- New waste disposal sites;
- Implementation of new/modified activities/products that may have significant impacts on the environment.

SLIMF (Small Forests):

Before starting any operation, the possible negative environmental impacts are identified and the operation is designed to minimise them. Assessments do not need to be documented unless legally required

SLIMF (Low Intensity Forests):

Before starting any operation, the possible negative environmental impacts at the site and landscape levels are identified and the operation is designed to minimise them. Assessments do not need to be documented unless legally required

Affects a wide environment

An EIA is the **formal** procedure that is followed to collect, organise, analyse, interpret and communicate data that are relevant to making a decision. The procedure can however be followed as an **informal** assessment for a project such as the planning of a harvesting operation. The **purpose of an EIA** is to minimise negative impacts, ensure the conservation of important features and to enhance positive aspects of the project.

Principles that a formal EIA should comply with are:

Informed Decision Making: Decision-making should be based on reliable information.

Accountability: Responsibilities must be clearly defined.

Environment in the Broadest Sense: The environment includes all aspects (i.e. physical, social, political, economic, visual).

Open Consultation: Consultation with all interested and affected parties must be done in a transparent manner.

Specialist Input: Specialists in the particular field must support impact assessments.

Alternatives: Consider all possible alternatives in terms of location and activities.

Mitigatory Measures: Assess mitigatory measures that will reduce or negate negative impacts and enhance the positive impacts of the planned activities.

Consider all Stages: The assessment should consider all stages of the development, from the planning phase through to closure.

Interviews with Forest Managers also testing their basic knowledge of EIAs.

Records of assessments and decisions.

Environmental management plans.

SLIME:

Manager's knowledge of the site and impacts of operations

Field observations

Management plan

Documented environmental statement or assessment where legally required

Indicator 6.1.3

All potential environmental impacts identified during assessments are considered during operations and planning and ensure that adverse impacts are avoided or mitigated

Verifiers & Guidance:

See also requirements 6.5.1 and 6.5.2.

Interviews with Forest Managers, supervisors and workers also testing their knowledge of minimum requirements.

Field observations and operational plans. For <u>large scale operations</u>, these provisions and controls will be documented in plans.

Indicator 6.1.4

Timely corrective actions are considered and

Verifiers & Guidance:

Corrective Actions:

implemented to address both past and potential non-conformances.

The first <u>objective</u> is, whenever there is a non-conformance:

- action is taken to correct any damage to the environment that may have occurred (corrective action); and
- measures are instituted to prevent the non-conformance from recurring (preventive action).

The <u>second objective</u> is to ensure that preventative action is taken where there is obvious potential for an activity to develop into a non-conformance with subsequent environmental impact(s).

The <u>third objective</u> is to ensure that CARs are reviewed periodically to identify persistent problem areas and to ensure that such problem areas are appropriately addressed, in either a corrective or a preventative manner.

Interviews with managers.

Comparison of quality of ongoing operations and associated record of past CARs.

Indicator 6.1.5

Corrective action requests (CARs) are recorded and closed out appropriately

SLIMF:

Timeous corrective actions are taken

Verifiers & Guidance:

Records of CARs

SLIMF:

Interviews with the forest Manager and workers and field observations

Indicator 6.1.6

Non-native plant (non-tree) and animal species are introduced and/or native species reintroduced only if consultation with acknowledged experts and regulatory authorities establishes that they are non-invasive and will bring environmental benefits; where appropriate, local stakeholders are consulted prior to any introduction; all introductions are closely monitored

Verifiers & Guidance:

Interviews with Forest Managers, environmental NGOs and government agencies.

Research briefs.

Licences and permits.

Criterion 6.2

Safeguards shall exist which protect rare, threatened and endangered species and their habitats (e.g. nesting and feeding areas). Conservation zones and protection areas shall be established, appropriate to the scale and intensity of forest management and the uniqueness of the affected resources. Inappropriate hunting, fishing, trapping and collecting shall be controlled.

Indicator 6.2.1

Rare, threatened and endangered species and their habitats present (or likely to be present) on the FMU have been identified and documented

SLIMF (Small Forests):

Where known, rare, threatened and endangered species and their habitats are protected.

SLIMF (Low Intensity Forests):

Where known, rare, threatened and endangered species and their habitats are mapped and protected.

Verifiers & Guidance:

Where survey data are incomplete, it should be assumed that relevant species ARE present.

Interviews with Forest Managers, local experts and government agencies.

Refer also to 7.1.7

The list of RTE species can be checked on the IUCN website www.redlist.org -> search -> Morocco

SLIMF (Small Forests):

Manager's knowledge of rare, threatened and endangered species in the area.

Records from other sources of species found on the site.

Field observations of nesting and feeding areas of rare, threatened and endangered species.

SLIMF (Low Intensity Forests):

Manager's and workers' knowledge of rare, threatened and endangered species in the area.

Reports of training for forest workers on protection issues.

Field observations of nesting and feeding areas of rare, threatened and endangered species.

Reports of the conservation status of the FMU from other sources.

Indicator 6.2.2

Where appropriate, there is co-operation with acknowledged experts, conservation organisations and regulatory authorities in identifying conservation zones and protection areas for rare, threatened and endangered species present; these habitats are demarcated on maps, and, where necessary, on the ground

SLIMF:

Other features which are important for conservation are identified and protected.

Verifiers & Guidance:

Records and maps.

Interviews with Forest Managers, local experts and government agencies.

SLIMF:

Maps showing conservation features

Field observations and interviews with forest manager

Indicator 6.2.3

Rare, threatened and endangered species are protected during operations

Verifiers & Guidance:

Operational plans.

Interviews with Forest Managers, local experts and government agencies.

Indicator 6.2.4

(Not applicable to SLIMF)

Conservation zones and protection areas, representative of existing ecosystems, are being protected in their natural state, based on the identification of key biological areas and the requirement for natural corridors (with special reference to plantations) and/or consultation with local experts and government agencies

Landscape scale conservation considerations are evident in field activities, staff/contractor actions and/or in coordination with adjoining landowners, conservation organizations or government conservation agencies.

Marocco:

6.2.4.1: The National Guiding Plan for protection of the atmosphere and the guiding regional plans are known and take into account by forest management.

Verifiers & Guidance:

Where less than 10% of the total area of large FMUs has been set aside for conservation zones and protection areas, justification must be provided for this in the form of consultation with local experts and/or government agencies.

For smaller FMUs the conservation zones and protection areas should exist within the FMU or in nearby landscapes.

Plans and maps and records of completed work.

Interviews with Forest Managers, local experts and government agencies.

Indicator 6.2.5

Verifiers & Guidance:

Page	26	of	49
------	----	----	----

Conservation management and protection activities are demarcated on maps, implemented and their impact monitored.

For <u>large scale organisations</u> these will be also be documented in plans.

SLIMF:

Conservation management and protection activities have been determined and are demarcated on maps

Plans and maps, including annual plan of operations.

Field observations

Indicator 6.2.6

Authorised hunting, fishing, grazing and collecting activities are managed to ensure they do not exceed sustainable levels and inappropriate activities are prevented

Verifiers & Guidance:

Policies and procedures.

Interviews with Forest Managers, local experts and government agencies.

Field observations and records of collection.

Criterion 6.3 Ecological functions and values shall be maintained intact, enhanced, or restored, including:

- Forest regeneration and succession.
- Genetic, species and ecosystem diversity.

AD 33-MA-03

Natural cycles that affect the productivity of the forest ecosystem.

Indicator 6.3.1

The status of the FMU with regard to:

- regeneration and succession
- genetic, species and ecosystem diversity
- natural cycles

is known or estimated.

Verifiers & Guidance:

This requirement applies to natural forest and plantation management organisations. Compliance might involve an initial assessment and monitoring of the following:

- Regeneration of natural forest areas harvested, degraded areas, fragmented areas, areas damaged by fire, conservation zones and protection areas;
- Impacts of past management e.g. logging, collection of NTFPs, soil erosion
- Distribution and status of plant communities;
- Conservation status of native floral and faunal assemblages, species and their habitats;
- Spread of invasive species
- Ongoing soil erosion
- Water quality

Records and maps

Interviews with Forest Managers and local experts.

Indicator 6.3.2

Silvicultural and/or other management systems are appropriate for the ecology of the forest and resources available

Verifiers & Guidance:

Interviews with Forest Managers and local experts

Indicator 6.3.3

Ecological functions (regeneration, succession, diversity, natural cycles) are maintained and where appropriate, there is a programme for

Verifiers & Guidance:

Enhancement, maintenance and restoration activities should be prepared to provide for the restoration of degraded natural areas, weed infestation, erosion, borrow pits, waste sites,

are demarcated on maps and comply with specifications made in national and regional best practice guidelines	Operational plans, interviews with staff and field observations.

SLIMF:

Buffer zones are maintained along watercourses and around water bodies and comply with national and regional best practice guidelines

Indicator 6.5.4

Verifiers & Guidance:

Operators are aware of and able to implement adequate emergency procedures for clean up following accidental oil and chemical spillages Operational plans, interviews with staff and field observations. No evidence of significant spillages.

Criterion 6.6

Management systems shall promote the development and adoption of environmentally friendly non-chemical methods of pest management and strive to avoid the use of chemical pesticides. World Health Organisation Type 1A and 1B chlorinated hydrocarbon pesticides; pesticides that are persistent, toxic or whose derivatives remain biologically active and accumulate in the food chain beyond their intended use; as well as any pesticides banned by international agreement. shall be prohibited. If chemicals are used, proper equipment and training shall be provided to minimise health and environmental risks.

Indicator 6.6.1

Verifiers & Guidance:

There is an up-to-date list of all pesticides used in the organisation that documents trade name, and active ingredient. Where not provided by the product label, authorised applications, application methods and rates will also be documented.

Chemical pesticides include herbicides, insecticides, fungicides, and rodenticides in the formulation applied in the field (including any surfactants, dispersants or solvents used).

Records of chemicals in use.

Receipts and invoices.

Procedures for the safe and appropriate use of chemicals

Indicator 6.6.2

Verifiers & Guidance:

Prohibited pesticides are not used except where:

Refer SGS Qualifor Work Instruction 16 for:

- a derogation of policy has been obtained from the FSC Secretariat; or
- Current list of prohibited pesticides;
- a temporary exemption has been authorised in terms of FSC-IP-0001, by the SGS Qualifor Programme Director/Manager, prior to use.
- Derogations; Temporary derogations; and
- Use of prohibited chemicals for emergency situations.

Chemical records

Indicator 6.6.3

Verifiers & Guidance:

Where chemicals are used on an ongoing basis the owner/manager must prepare and implement a strategy that will have at least the following components:

Usage, and reduction targets should be expressed on a per hectare basis and sub-divided according to operations and

reduction of use is a stated as a long-term objective;

catchment/drainage basin; targets should be quantitative Some organisations may be allowed to increase use of certain chemical pesticides in the short or medium term, where the use

a range of methods for pesticide control providing justification for chemical-use as an option;

This requirement applies to nurseries located on the certified FMU.

of these pesticides is justified on social or environmental

procedures that promote the optimal use of chemicals (timing, follow-up, equipment, etc)

Chemical use records.

grounds, see 6.6.

clear measurable targets for long term chemical use; with reduction as the objective;

Usage is expressed per product, on a per

hectare basis and sub-divided according to

catchment or drainage basin.

SLIMF:

Record is kept of the amount of chemicals used on the FMU and there is indication that alternative methods are being considered leading to a reduction in use of the long term

Indicator 6.6.4

(Not applicable to SLIMF)

Where pesticides are the preferred method of control for environmental or social reasons, the consideration of alternatives and justification for their use has been determined and documented in cooperation with acknowledged experts

Verifiers & Guidance:

Pesticides may be preferred in some instances, for example, to eliminate invasive weeds, control vectors of serious human diseases.

Interviews with Forest Managers and local experts.

Documented justification.

Indicator 6.6.5

All transport, storage, handling, application and emergency procedures for clean up following accidental spillages of chemical pesticides comply, as a minimum, with the ILO publications 'Safety & Health in the Use of Agrochemicals: A Guide', and 'Safety in the Use of Chemicals at Work'

Verifiers & Guidance:

Procedures and records.

Interviews with staff

Criterion 6.7 Chemicals, containers, liquid and solid non-organic wastes including fuel and oil shall be disposed in an environmentally appropriate manner at off-site locations.

Indicator 6.7.1

The owner/manager should ensure that nonorganic wastes (e.g. oil, tyres, containers, etc.), including those generated by contractors working on the FMU are recycled where possible

Verifiers & Guidance:

Field observations and interviews with staff

Indicator 6.7.2

The owner/manager should ensure that waste that cannot be re-cycled, including that generated by contractors working on the FMU, is disposed of in environmentally appropriate ways.

Verifiers & Guidance:

Waste includes:

- Surplus chemicals
- Chemical containers
- Plastic waste
- Fuels and lubricants
- Worn vehicle tyres
- Used vehicle batteries
- Waste produced from processing operations
- Domestic

Evidence that waste has been disposed off in an acceptable manner.

Indicator 6.7.3

The owner/manager should ensure that the handling and disposal of chemicals and

Verifiers & Guidance:

Interviews with staff

chemical containers, including that generated by contractors working on the FMU, should comply, as a minimum, with the ILO publications 'Safety & Health in the Use of Agrochemicals: A Guide', and 'Safety in the Use of Chemicals at Work' Indicator 6.7.4 Verifiers & Guidance: Presence of waste receptacles or other On-site facilities for easy collection of waste are provided Criterion 6.8 Use of biological control agents shall be documented, minimised, monitored and strictly controlled in accordance with national laws and internationally accepted scientific protocols. Use of genetically modified organisms shall be prohibited. Verifiers & Guidance: Indicator 6.8.1 Interviews with Forest Managers. The use of biological control agents is avoided or minimised by making use of best available Policies and procedures. alternative control methods not entailing excessive cost Verifiers & Guidance: Indicator 6.8.2 Documentation Any use of biological control agents must be supported by documented justification which details: alternative methods of pest or disease control considered, ecological impact assessment, relevant organisations and regulatory authorities consulted Indicator 6.8.3 Verifiers & Guidance: Documentation All activities where biological control agents are used are documented and monitored Indicator 6.8.4 Verifiers & Guidance: Interviews with staff. No genetically modified organisms are used in management, production or research Records of biological material sources and supplies programmes within the FMU. Criterion 6.9 The use of exotic species shall be controlled and actively monitored to avoid adverse ecological impacts Indicator 6.9.1 Verifiers & Guidance: Records of scientific studies. Exotic species are assessed for adverse ecological impacts and such impacts avoided Interviews with Forest Managers Verifiers & Guidance: Indicator 6.9.2 Monitoring records Unwanted regeneration is monitored, and if necessary controlled

Criterion 6.10

Forest conversion to plantations or non-forest land uses shall not occur, except in circumstances where conversion:

- a) entails a very limited portion of the forest management unit; and
- b) does not occur on high conservation value forest areas; and
- will enable clear, substantial, additional, secure, long-term conservation benefits across the forest management unit.

Indicator 6.10.1

Forest conversion, if any, is limited to small areas (and its extent is acceptable to conservation organisations, regulatory authorities) and/or is of negligible environmental impact

Verifiers & Guidance:

Clear felling and replanting of a natural or semi-natural forest with a mixture native species in the absence of satisfactory natural regeneration is not considered forest conversion to plantation. Clear felling and replanting of a natural or seminatural forest with an exotic species is considered conversion.

The clearance of isolated single trees or pockets of natural vegetation less than 0.001 ha to consolidate plantation blocks or for essential infrastructure development is only permitted where acknowledged experts and regulatory authorities have been consulted and find it acceptable.

Interviews with Forest Managers, local experts and government agencies.

Plans and maps.

Field observations.

Indicator 6.10.2

Conversion and aforestation do not occur in conservation zones, protection areas (see 6.2) or areas retained as representative of existing ecosystems (see 6.2)

Verifiers & Guidance:

Interviews with Forest Managers, local experts and government agencies.

Plans and maps.

Field observations.

Indicator 6.10.3

Conservation benefits of conversion to nonforest land use or aforestation or compensatory conservation activities planned have been identified and assessed in cooperation with acknowledged experts; in the case of compensatory conservation activities, their extent is acceptable to conservation organisations, regulatory authorities

Verifiers & Guidance:

Conversion may, for example, have a net conservation benefit where an area is converted back to its original natural or seminatural habitat type such as open wetland or grassland.

Interviews with Forest Managers, local experts and government agencies.

Indicator 6.10.4

Conservation benefits are substantial, additional, secure, and long term

Verifiers & Guidance:

Scientific evidence and interviews with Forest Managers and local experts

PRINCIPLE 7. MANAGEMENT PLAN:

A management plan - appropriate to the scale and intensity of the operations - shall be written, implemented, and kept up to date. The long-term objectives of management, and the means of achieving them, shall be clearly stated.

Criterion 7.1 The management plan and supporting documents shall provide:

- a) management objectives;
- description of the forest resources to be managed, environmental limitations, land use and ownership status, socio-economic conditions, and a profile of adjacent lands;
- c) rationale for rate of annual harvest and species selection;
- d) provisions for monitoring of forest growth and dynamics;
- e) environmental safeguards based on environmental assessments;
- plans for the identification and protection of rare, threatened and endangered species;
- maps describing the forest resource base including protected areas, planned management activities and land ownership;
- description and justification of harvesting techniques and equipment to be used.

Indicator 7.1.1

There is a management plan (or overview linking different planning documents)

SLIMF:

Management plans may consist of brief notes and a map

Verifiers & Guidance:

Management plan

SLIMF:

Checking the plan exists and contains all the information required.

Field checks that the plan has been implemented in the past and is currently still followed.

Indicator 7.1.2

Management objectives are clearly described

SLIMF:

An outline is provided of objectives and how these will be achieved

Verifiers & Guidance:

Management plan

Indicator 7.1.3

Forest resources, attributes of any high conservation value forest, environmental limitations, special characteristics of the forest, land use and ownership status, socio-economic conditions, and adjacent lands are described

SLIMF:

The forest is broadly described

Verifiers & Guidance:

Management plan

Indicator 7.1.4

Rate of harvest, species selection, management

Verifiers & Guidance:

Management plan

prescriptions (for production and conservation zones) and operational techniques are documented and justified SLIMF: Sustainable harvest limits and regeneration plans (long term, at least one full rotation period for the whole of the FMU) are provided Indicator 7.1.5 Provisions for monitoring forest growth and dynamics are described SLIMF: The plans include provisions for monitoring forest regrowth	SLIMF: Harvest limits are established at sustainable limits and are based on conservative estimates of tree growth and yield. Silvicultural prescriptions take into account factors such as DBH, seed trees for each species, etc. Verifiers & Guidance: Management plan

Interviews with Forest Managers and consultation with local stakeholders, experts and government agencies.

Indicator 7.1.11 Verifiers & Guidance: Management plan and operational controls. Harvesting techniques and equipment are described and justified Interviews with staff **SLIMF:** The plan describes harvesting methods and silviculture to ensure responsible management Indicator 7.1.12 Verifiers & Guidance: Management plan and operational controls. For <u>large scale operations</u>, planning includes short (operational/annual), medium (tactical/3-5 Interviews with staff yearly) and long (strategic, rotation/harvesting cycle) term plans covering all operations and these shall be documented. For <u>small-scale operations</u> a long-term plan covering harvesting operations will be documented. The requirement for documented planning in small-scale operations will be decided by the scale, duration and intensity of the operation. **SLIMF:** Only a long term plan as outlined in Indicators 7.1.2 to 7.1.11 is required. Verifiers & Guidance: Indicator 7.1.13 Management plan and operational controls. Plans are being implemented and any deviation from prescription or rate of progress is Interviews with staff adequately justified; overall objectives will still be achieved and the ecological integrity of the forest maintained **SLIMF:** Plans are being implemented and deviations (whilst maintaining long term objectives) can be explained Criterion 7.2 The management plan shall be periodically revised to incorporate the results of monitoring or new scientific and technical information, as well as to respond to changing environmental, social and economic considerations. Indicator 7.2.1 Verifiers & Guidance: Company procedures In large scale organisations, staff members with responsibility for the overall compilation and updating of the management plan are identified Indicator 7.2.2 Verifiers & Guidance: **Publications** (Not applicable to SLIMF) Interviews with Forest Managers New scientific and technical developments in

production forestry and biodiversity

conservation are available at the FMU or Forest

incorporated into planning on a regular basis Forest planning documents **SLIMF:** Refer Indicators 7.2.3 and 7.2.4 Verifiers & Guidance: Indicator 8.4.2 Interviews with local experts and Forest Managers There is evidence that monitoring results are used to improve forest management SLIMF: Refer Indicators 7.2.3 and 7.2.4 Criterion 8.5 While respecting the confidentiality of information, forest managers shall make publicly available a summary of the results of monitoring indicators, including those listed in Criterion 8.2. Verifiers & Guidance: Indicator 8.5.1 Public summary Regular summaries of monitoring results and analysis by FMU are available to the public SLIMF: Refer Indicator 7.4.1

PRINCIPLE 9. MAINTENANCE OF HIGH CONSERVATION VALUE FORESTS:

Management activities in high conservation value forests shall maintain or enhance the attributes, which define such forests. Decisions regarding high conservation value forests shall always be considered in the context of a precautionary approach.

Criterion 9.1 Assessment to determine the presence of the attributes consistent with High Conservation Value Forests will be completed, appropriate to scale and intensity of forest management

Indicator 9.1.1

The FMU has been adequately assessed (in consultation with conservation organisations, regulatory authorities and other local and national stakeholders) and any HCVFs and their biological and/or socio-economic or cultural attributes have been identified

SLIMF:

The FMU has been adequately assessed (in consultation with conservation organisations and regulatory authorities) and any HCVFs and their biological and/or socio-economic or cultural attributes have been identified

Verifiers & Guidance:

This requirement must be applied to all forests undergoing assessment. HCVFs possess one or more the following attributes:

- Forest areas containing globally, regionally or nationally significant concentrations of biodiversity values and/or large landscape level forests where viable populations of most/all naturally occurring species exist in natural patterns of distribution and abundance;
- Rare, threatened or endangered ecosystems;
- Forests that provide basic ecological services in critical situations (e.g. water quality or flow, protection against erosion or natural disasters such as cyclones or hurricanes, pollinators);
- Forests fundamental to meeting basic economic or biophysiological needs of local communities or critical to local community cultural identity.

Interviews with Forest Managers and local experts.

Evidence of assessments.

economic or cultural attributes, there should be joint analysis and decision-making with the stakeholders directly affected; all reasonable efforts should be made to establish comanagement agreements with these stakeholders

All biological and/or social attributes of any

Interviews with Forest Managers, local experts and communities. Affected communities/persons are listed on the stakeholder list (refer Criterion 4.4).

Criterion 9.3

Indicator 9.3.1

The management plan shall include and implement specific measures that ensure the maintenance and/or enhancement of the applicable conservation attributes consistent with the precautionary approach. These measures shall be specifically included in the publicly available management plan summary.

The with the patterns of forest such areas within the landscape are known and considered during planning	antations should promote the protection, restoration forests, and not increase pressures on natural forests. de zones and a mosaic of stands of different ages and sed in the layout of the plantation, consistent with the scale and layout of plantation blocks shall be consistent stands within the natural landscape. Verifiers & Guidance: Maps
Criterion 10.2 The design and layout of pland conservation of natura Wildlife corridors, streamsi rotation periods, shall be us scale of the operation. The with the patterns of forest solution areas within the FMU are identified and demarcated on maps and such areas within the landscape are known and considered during planning Indicator 10.2.2 For protection, restoration and conservation of natural forest and wildlife corridors, refer to	antations should promote the protection, restoration forests, and not increase pressures on natural forests. de zones and a mosaic of stands of different ages and sed in the layout of the plantation, consistent with the scale and layout of plantation blocks shall be consistent stands within the natural landscape. Verifiers & Guidance: Maps
Criterion 10.2 The design and layout of pland conservation of natura Wildlife corridors, streamsi rotation periods, shall be us scale of the operation. The with the patterns of forest sometime of the patterns of streams and such areas within the landscape are known and considered during planning Indicator 10.2.2 For protection, restoration and conservation of natural forest and wildlife corridors, refer to Criteria 6.2	antations should promote the protection, restoration forests, and not increase pressures on natural forests. de zones and a mosaic of stands of different ages and sed in the layout of the plantation, consistent with the scale and layout of plantation blocks shall be consistent stands within the natural landscape. Verifiers & Guidance: Maps Verifiers & Guidance:
Criterion 10.2 The design and layout of pland conservation of natura Wildlife corridors, streamsi rotation periods, shall be us scale of the operation. The with the patterns of forest streams in the patterns of patterns of forest streams in the patterns of patte	antations should promote the protection, restoration forests, and not increase pressures on natural forests. de zones and a mosaic of stands of different ages and sed in the layout of the plantation, consistent with the scale and layout of plantation blocks shall be consistent stands within the natural landscape. Verifiers & Guidance: Maps Verifiers & Guidance:

The scale and layout of existing and new plantation blocks are consistent with the patterns of forest stands within the natural landscape.

Maps and field observations

Criterion 10.3

Diversity in the composition of plantations is preferred, so as to enhance economic, ecological and social stability. Such diversity <u>may</u> include the size and spatial distribution of management units within the landscape, number and genetic composition of species, age classes and structures.

Indicator 10.3.1

Plantation planning and reestablishment make provision for diversity in species and/or provenances and/or clones to achieve optimal economic, ecological and social stability; restructuring of even-aged and/or stands low in diversity is carried out where necessary

Verifiers & Guidance:

Forest plans and maps Field observations

Indicator 10.3.2

Maximum clear-cut size is defined. Documented justification should be provided where there are potential adverse environmental or socio-economic impacts

SLIMF:

Maximum clear-cut size is defined and justified.

Verifiers & Guidance:

Policies and procedures.

SLIMF:

Interviews with Forest Managers and field observations

Criterion 10.4

The selection of species for planting shall be based on their overall suitability for the site and their appropriateness to the management objectives. In order to enhance the conservation of biological diversity, native species are preferred over exotic species in the establishment of plantations and the restoration of degraded ecosystems. Exotic species, which shall be used only when their performance is greater than that of native species, shall be carefully monitored to detect unusual mortality, disease, or insect outbreaks and adverse ecological impacts.

Indicator 10.4.1

Selection of species, provenances and clones is based on documented trials that demonstrate their suitability to the site and management objectives

SLIMF:

The species chosen for plantations are suited to the site and matched to the objectives.

Verifiers & Guidance:

Scientific evidence and interviews with local experts

SLIMF:

Discussions with manager about plantation objectives

Plans for future planting

Indicator 10.4.2

Exotic species are used only where they outperform native species in meeting management objectives

Verifiers & Guidance:

Scientific evidence and interviews with local experts

Indicator 10.4.3

Information is available on seed sources and these can be traced to the stand data

Verifiers & Guidance:

Plant records

AD 33-MA-03

	forest management area, appropriate to the scale of the inned in regional standards, shall be managed so as to forest cover.
	Verifiers & Guidance: SLIMF: Field observations of conservation features Plans for future improvements maintain or improve soil structure, fertility and
biological activity. The tech construction and maintenar	nniques and rate of harvesting, road and trail nce, and the choice of species shall not result in long verse impacts on water quality, quantity or substantial
Indicator 10.6.1 There is information on all soil types in the plantation area that indicate their susceptibility to degradation from forest operations and appropriate plantation species; Small growers and SLIMF can demonstrate their efforts to get access to adequate information on soil types occurring within the managed area.	Verifiers & Guidance: Interviews with Forest Managers and local experts. Documented site information. Evidence that site information is being used in planning of operations.
Indicator 10.6.2	Verifiers & Guidance:
Where soils are degraded from previous activities, there are plans to restore them	Soil degradation through erosion, oil and chemical spills, etc. Interviews with Forest Managers and field observations.
Indicator 10.6.3 Major water resources within the forest area are	Verifiers & Guidance: Maps and interviews with Forest Managers
identified	mapo and interviewe with reconstructing of
Indicator 10.6.4 For impacts on soil and other biophysical	Verifiers & Guidance:

Criterion 10.7

Measures shall be taken to prevent and minimise outbreaks of pests, diseases, fire and invasive plant introductions. Integrated pest management shall form an essential part of the management plan, with primary reliance on prevention and biological control methods rather than chemical pesticides and fertilisers.

ndicator 10.7.1	Verifiers & Guidance:
The principle forest pests and diseases are identified.	
For <u>large scale organisations</u> these shall be documented.	
Indicator 10.7.2	Verifiers & Guidance:
In terms of pest and/or weed control and management, refer to Criterion 6.6	
	T
Indicator 10.7.3	Verifiers & Guidance:
Appropriate control and remedial action is taken in the event of a pest or disease problem.	Interview with Forest Managers and staff.
	Documentation
For <u>large scale organisations</u> these actions shall be documented.	
Indicator 10.7.4	Verifiers & Guidance:
Where appropriate, adequate measures are taken to protect the forest from fire.	These measure will include documented* procedures for fire suppression that include definition of responsibilities and reporting lines.
For <u>large scale organisations</u> there is regular monitoring of fire readiness that test all	Interviews with staff and records of training.
procedures	Fire readiness and control procedures.

monitored on a regular basis. Evidence of

shall include regular assessment of potential on-site and off-site impacts, (e.g. natural regeneration, effects on water resources and soil fertility, and impacts on local welfare and social well-being), in addition to those elements addressed in principles 8, 6 and 4. No species should be planted on a large scale until local trials and/or experience have shown that they are ecologically well-adapted to the site, are not invasive, and do not have significant negative ecological impacts on other ecosystems. Special attention will be paid to social issues of land acquisition for plantations, especially the protection of local rights of ownership, use or access.

Indicator 10.8.1	Verifiers & Guidance:
For potential on-site impacts, see Criteria 6.1 and 6.5	
Indicator 10.8.2	Verifiers & Guidance:
(Not applicable to SLIMF)	Off-site impacts may include:
Potential biophysical off-site impacts shall be	Spread of exotic plantation species.
